conzyx

Your device. Your runtime. Your rules.

The complete developer ecosystem, in your pocket.

BY CODEAIR SOFTWARE SOLUTIONS

THE PROBLEM

Your work lives on one machine.

Developers are chained to their laptops. The terminal, the tools, the agents, the entire dev environment sits on a desk. Step away and work stops.

Locked to a desk

Travel, commute, power cut, a broken laptop, and you are locked out of your own work.

A phone treated like a toy

The phone in your pocket is more powerful than the desktops of ten years ago, yet it cannot run your workflow.

Ideas wait for Monday

An idea at midnight stays an idea until you are back at your machine.

THE PROBLEM

AI assistants work for their makers first.

Hosted AI agents run on company servers. Their limits, their sandbox, their rules. Not yours.

Vendor lock-in

You cannot plug your own API key into ChatGPT, Claude, or Gemini apps. Their app, their model, no choice.

Black-box agents

Work happens somewhere you cannot see. What did the AI actually do? You will never know.

Unreliable by design

Sometimes it builds, sometimes it refuses, sometimes it invents. And you cannot verify any of it.

THE SHIFT

Developers want laptop convenience on mobile, with their own rules.

What they have today

Laptop or nothing

Company servers, company limits

One provider, no switching

Agents you cannot inspect

What they actually want

Full dev power in their pocket

Their runtime, their keys, their rules

Any AI provider, switched in seconds

Every action visible and verifiable

INTRODUCING

Conzyx

A complete developer ecosystem on your phone. A real terminal. Real agentic coding. Real files. No laptop required, no company sandbox, no one else's limits.

Real terminal **Agentic coding** **File manager** **Plugin marketplace**

HOW IT WORKS

A dev machine, not a chatbot.

```
$ conzyx agent run --task "build login screen"
Claude is editing 4 files... done in 38s
$ conzyx deploy --target staging
Building APK... deployed
$ everything above ran on your phone_
```

Real terminal

A full shell on Android. Run commands, manage processes, do real work.

Parallel agents

Up to 3 agents working at once, each on its own task. The phone throttles smartly under load.

File manager

Browse, open, and edit your project files right on the device.

INSIDE CONZYX

Your agents, your choice.

One tap switches the engine behind your work. Every agent runs with full tool access on your device.

Claude | Codex | Gemini | DeepSeek | **Custom: any API**

- Claude, Codex, Gemini, and DeepSeek tabs, each a full agentic coding session
- Gemini API mode with a real function-calling loop: shell, read, write, edit, and list tools
- Custom tab: point Conzyx at any OpenAI-compatible endpoint and go

FREEDOM 1

Any API.
Bring your own key.

Plug in ANY provider key and use the app's full power with it. No vendor lock-in. Your key, your bill, your control.

```
paste key, pick provider, done
key> nvapi-**************** NVIDIA Nemotron connected
free API, full agent power, zero lock-in
```

- NVIDIA's Nemotron API is free within rate limits. Use it here at zero cost.
- ChatGPT, Claude, and Gemini apps will never let you do this. Conzyx does.
- Switch providers in seconds when prices, limits, or quality change.

FREEDOM 2

Nothing hidden. Ever.

Hosted agents are black boxes. Conzyx shows you everything, because it all happens on your device.

Every command visible

Each shell command the agent runs appears in your terminal, in real time.

Every file operation visible

Reads, writes, and edits show up exactly where they happen.

Verifiable output

If the agent says it built something, you can open it and check. Trust, but verify.

MARKETPLACE

Superpowers, one tap away.

A free, fully open-source marketplace of skills and plugins. Curated capabilities ship pre-seeded, with one-tap updates when upstream repos change.

rea

Reverse-engineer anything with agents.

designa

A free, open-source Figma alternative in Rust.

flick

Turn video scripts into scene animations.

app-store-screenshots

AI-generated app store screenshots.

WHO IT IS FOR

A dev machine in every pocket.

01

Developers

Code, review, and deploy from anywhere. The commute becomes a work session.

02

Founders

Prototype and ship without waiting on a laptop. Ideas become builds the same night.

03

Students

Learn to build real software with the device they already own. No expensive machine needed.

BUSINESS MODEL

Free.
Forever.

Conzyx is 100% free and fully open source. No paid listings, no purchase gates, no subscriptions inside the app. The marketplace is free for everyone, publishers and users alike.

100% free

0 paywalls

100% open source

BUILT BY

Codeair Software Solutions

An AI-first IT company crafting digital products for clients worldwide.

475+ projects **4.9**/5 rating **10**+ years

UI/UX Design, SaaS Platform Architecture, AI/ML Engineering, Mobile App Development, Custom Websites, MVP Strategy.
